

LARAVEL ASSESSMENT

DOCUMENTATION BY:

1. MUHAMMAD AFIQ BIN ALUSRIZAN

Description

This document outlines the process I followed in completing this assessment. While there were a few mistakes made along the way, they provided valuable learning opportunities, and I was able to improve through those experiences.

All information, materials, and data provided on this platform are the exclusive property of the author and may not be reproduced, distributed, or used in any form without prior written permission.

Source: <https://laravel.com/>

Install laravel

- My Composer version was outdated (from 2021 😓),
- So I updated it.

```
C:\Users\Aifiq>composer self-update
Upgrading to version 2.8.8 (stable channel).
```

Create a new Laravel project

```
C:\Users\Aifiq>laravel new form_project

Laravel

Would you like to install a starter kit? [No starter kit]:
[none] No starter kit
[breeze] Laravel Breeze
[jetstream] Laravel Jetstream
> none

Which testing framework do you prefer? [PHPUnit]:
[0] PHPUnit
[1] Pest
> 1

Would you like to initialize a Git repository? (yes/no) [no]:
> yes
```

After creating the project, I tested it first.

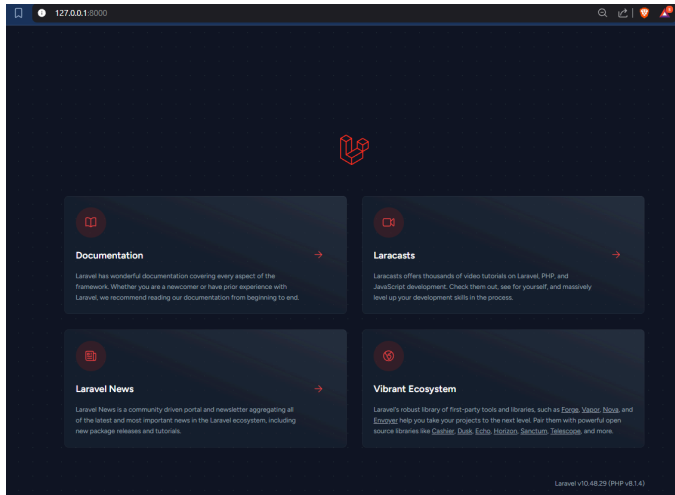

```
PS C:\Users\Aifiq\form_project> php artisan serve

INFO Server running on [http://127.0.0.1:8000].

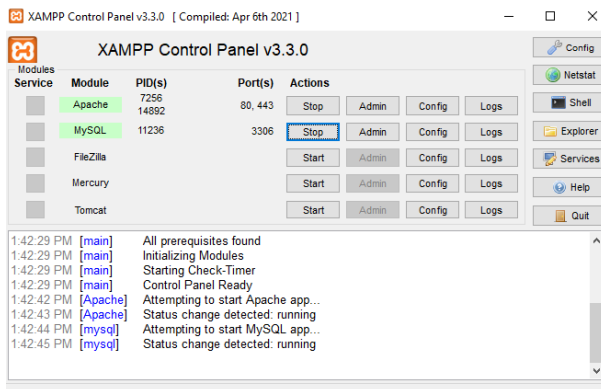

Press Ctrl+C to stop the server

2025-04-17 13:39:33 ..... ~ 1s
2025-04-17 13:39:34 /favicon.ico ..... ~ 0s
█
```

Default Laravel setup

Start XAMPP

Create a new database

Update the .env file

```
DB_CONNECTION=mysql
DB_HOST=127.0.0.1
DB_PORT=3306
DB_DATABASE=form_project
DB_USERNAME=root
DB_PASSWORD=
```

Then, check the Laravel database connection.

```
PS C:\Users\Aifiq\form_project> php artisan migrate

INFO: Preparing database.

Creating migration table ..... 38ms DONE

INFO: Running migrations.

2014_10_12_000000_create_users_table 44ms DONE
2014_10_12_100000_create_password_reset_tokens_table 32ms DONE
2019_08_19_000000_create_failed_jobs_table 117ms DONE
2019_12_14_000001_create_personal_access_tokens_table 63ms DONE

PS C:\Users\Aifiq\form_project>
```

Create a table

P/S: I usually create tables manually, but according to the documentation, we're supposed to use a command—so let's try that:

<https://laravel.com/docs/12.x/migrations#main-content>

```
PS C:\Users\Aifiq\form_project> php artisan make:migration create_user

INFO: Migration [C:\Users\Aifiq\form_project\database\migrations\2025_04_17_060328_create_user.php] created successfully.
```

The table was created successfully.

```
2025_04_17_060328_create_user.php U
```

Add code according to the requirements

```
public function up(): void
{
    Schema::create('user', function (Blueprint $table) {
        $table->id();
        $table->string('name');
        $table->string('email')->unique();
        $table->string('password');
        $table->enum('gender', ['Male', 'Female']);
        $table->date('birthday');
        $table->boolean('status_active')->default(false);
        $table->softDeletes();
        $table->timestamps();
    });
}
```

Then run the migrate command.

```
>> C:\Users\Aifiq\form_project> php artisan migrate

INFO: Running migrations.

2025_04_17_060328_create_user ..... 44ms DONE
```

Checked the database , it's there ✓

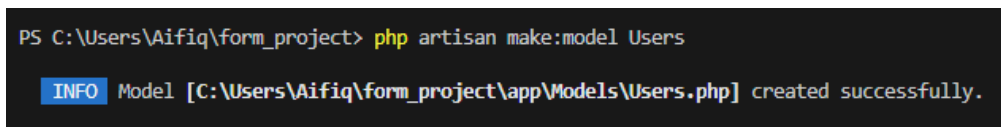

Also verified the contents inside the table.

Create a module

<https://laravel.com/docs/12.x/eloquent>

Add the necessary code.

Create a controller

<https://laravel.com/docs/12.x/controllers#main-content>

After that, I realized that I had followed the requirements incorrectly; I should have used Laravel version 8 and PHP version 8.1. After making several setups and changes, I started my process from the beginning. However, I did not have time to take individual screenshots. The image below shows the name and version changes.

```
PS C:\Users\Aifiq\form_website> php -v
PHP 8.1.4 (cli) (built: Mar 16 2022 09:33:31) (ZTS Visual C++ 2019 x64)
Copyright (c) The PHP Group
Zend Engine v4.1.4, Copyright (c) Zend Technologies
PS C:\Users\Aifiq\form_website> php artisan --version
Laravel Framework 8.83.29
PS C:\Users\Aifiq\form_website>
```

2025_04_17_101645_create_members_table.php

MemberController.php

Models
Member.php

I developed a function in the `MemberController` to store data.

```
// Store members
public function store(Request $request)
{
    $request->validate([
        'name' => 'required|string|max:255',
        'email' => 'required|email|unique:members,email',
        'password' => 'required|string|min:6',
        'gender' => 'required|in:Male,Female',
        'birthday' => 'required|date',
    ]);

    Member::create([
        'name' => $request->name,
        'email' => $request->email,
        'password' => Hash::make($request->password),
        'gender' => $request->gender,
        'birthday' => $request->birthday,
        'status_active' => $request->has('status_active'),
    ]);

    return redirect()->route('member.table');
}
```

I also implemented the code to display tables for both active and inactive members.

```
// Show table page
public function table()
{
    $activeMembers = Member::where('status_active', true)->get();
    $inactiveMembers = Member::where('status_active', false)->get();

    return view('member.table', compact('activeMembers', 'inactiveMembers'));
}
```

Additionally, I implemented soft delete functionality for the data.

```
// Soft delete members
public function delete($id)
{
    $members = Member::findOrFail($id);
    $members->delete();

    return back()->with('success', 'members deleted successfully.');
```

After that, I created the Blade view files: `create.blade.php` and `table.blade.php`.

Subsequently, I designed the user interface and integrated all the available data and functions.

```
<form action="{{ route('member.store') }}" method="POST">
    @csrf

    <div class="mb-3">
        <label class="form-label">Name</label>
        <input type="text" name="name" class="form-control" placeholder="Enter full name" value="{{ old('name') }}">
    </div>

    <div class="mb-3">
        <label class="form-label">Email</label>
        <input type="email" name="email" class="form-control" placeholder="example@mail.com" value="{{ old('email') }}">
    </div>

    <div class="mb-3">
        <label class="form-label">Password</label>
        <input type="password" name="password" class="form-control" placeholder="*****">
    </div>

    <div class="mb-3">
        <label class="form-label">Gender</label>
        <select name="gender" class="form-select">
            <option value="Male" {{ old('gender') === 'Male' ? 'selected' : '' }}>Male</option>
            <option value="Female" {{ old('gender') === 'Female' ? 'selected' : '' }}>Female</option>
        </select>
    </div>

    <div class="mb-3">
        <label class="form-label">Birthday</label>
        <input type="date" name="birthday" class="form-control" value="{{ old('birthday') }}">
    </div>

    <div class="form-check mb-4">
        <input class="form-check-input" type="checkbox" name="status_active" id="status_active" {{ old('status_active') ? 'checked' : '' }}>
        <label class="form-check-label" for="status_active">
            . . .
        </label>
    </div>
```

I then updated my model accordingly.

```
class Member extends Model
{
    use HasFactory;
    use SoftDeletes;

    protected $fillable = [
        'name',
        'email',
        'password',
        'gender',
        'birthday',
        'status_active'
    ];

    protected $casts = [
        'birthday' => 'date',
    ];

    protected $dates = ['deleted_at'];
}
```

I also modified my routes.

```
Route::get('/', function () {
    return view('member.create');
});

Route::get('/member/create', [MemberController::class, 'create'])->name('member.create');
Route::post('/member/store', [MemberController::class, 'store'])->name('member.store');
Route::get('/member/table', [MemberController::class, 'table'])->name('member.table');
Route::delete('/member/delete/{id}', [MemberController::class, 'delete'])->name('member.delete');
```

Below are the results and the user interface.

The screenshot shows a web browser window with the address bar displaying '127.0.0.1:8000/member/create'. The main content is a form titled 'Create New Member' with a blue header. The form contains the following fields and controls:

- Name:** A text input field with the placeholder text 'Enter full name'.
- Email:** A text input field with the placeholder text 'example@mail.com'.
- Password:** A text input field with masked characters '*****'.
- Gender:** A dropdown menu currently showing 'Male'.
- Birthday:** A date picker field showing 'dd/mm/yyyy'.
- Status Active:** A checkbox that is currently unchecked.
- Navigation:** A button labeled '← Back to Table' on the left and a green button labeled 'Create Member' on the right.

127.0.0.1:8000/member/table						
Member Management

Add New Member						

Final Note

To be completely honest, I was unable to complete all aspects of the project due to time constraints and other commitments. This is the extent of what I was able to accomplish within the given timeframe. Nevertheless, I found this assessment to be an engaging and insightful experience.

I plan to continue updating and enhancing this project over time, potentially adding various new features and improvements.
